

A device for the people descent ensuring includes a belt with the flexible fixing and ensuring ties fastened to its frame, the means to fasten it to a support and to the belt frame, in which the flexible fixing and ensuring ties are made of a single endless rope. The means for fastening the rope to the support is made as the removable bracket with a roller, an ensuring chain and a safety hook, and the means for fastening to the belt frame is made as a plain yoke which encloses the belt frame, is fixed to it and contains the braking blocks having beds with the buckled surfaces and facing each other in such a way that projections of one of the blocks is in the notches of the other, and one of the braking blocks is movable and connected to an eccentric, which has a handle, and the other is stationary and has a spring to the yoke fixing pin with a trigger, which is inserted into the yoke hole and into one of the holes in the belt frame. The endless rope is suspended by the roller of the removable bracket with a possibility to move and tighten down by a free ring on it, so that one end of the endless rope - for fixing, is secured to the belt frame, and the other - is ensuring and braking and is inserted into the yoke between the two braking blocks, in its notches.
