

The invention concerns a compound for pointing structural elements, in particular gypsum plaster base boards with paper facing. Said compound comprises, in weight percent relative to the compound total volume: 50 to 85 % of a mineral filler; 1 to 20% of an organic binder dispersible in aqueous phase; 1 to 15 % of a silicate-containing agent other than the mineral filler; 0,2 to 5 % of a hydrophobic agent which is a siliconized derivative; 0.05 to 5 % of polyvinyl alcohol; water to reach 100 %. The invention also concerns a method for making a structure such as a partition, a wall or ceiling cladding.
