

The invention concerns compounds of formula (I), as well as their addition salts with acids or organic salts, their solvates and/or hydrate(s), exhibiting affinity and selectivity for arginine-vasopressin  $V_{1b}$  receptors and/or for oxytocin receptors, and further, for certain compounds an affinity for  $V_{1a}$  receptors. The invention also concerns the method for preparing them, intermediate compounds of formula (IV) useful for their preparation, pharmaceutical compositions containing them and their use for preparing medicines.
