

Invention relates to the food, and to the liqueur, vodka, cognac, and wine-making industry, to the production of glass and plastic bottles and other different tanks for storing the beverages. Element for protection of the beverage against counterfeiting consists of a glass ball with coating of entire or part of the surface of ball by another substance. Nitride of one of the metals of the subgroup of titanium is used as the substance applied on the surface of ball. This embodiment of invention provides an increase of efficiency of protection of beverages against counterfeiting.
