

Self-fixation wall block has body made of porous concrete and fixation elements arranged as sockets and lugs used for placement in those sockets at combining of blocks into wall structure. Block is equipped with at least one insert element that is made of heavy concrete that has larger strength at compression compared to porous concrete of body. Surfaces of end of lug and bottom of socket are used for resting one on another at combining of blocks into wall structure for taking of vertical load and are surfaces of insert element.
