

A device for displacing goods, in particular packed into individual small packages (11) being displaced on the display surfaces of shelves, mainly at self-service stores, has an arrangement (2, 14) for guiding of, at least, one pushing arm (3) equipped with a driving spring (6) fastened to upper end of pushing arm (3), which is installed above the goods or individual small packages (11) with goods to be displaced. Each pushing arm (3) has two elements (4, 5) connected to each other by a hinge (10), which is located behind the goods or individual small packages (11) in open common package (12).
