

The present invention relates to a transdermal delivery device disposal system for disposing of a transdermal delivery device containing at least one pharmaceutically active component. The disposal system contains at least one sheet or substrate on which an adhesive is coated; and one or more of the following components: (a) monomer, and optionally comonomer(s), to be polymerized; (b) an initiator, and optionally co-initiators, to initiate the polymerization; (c) at least one crosslinking agent to crosslink the (co)polymer; and (d) at least one deactivating agent to chemically alter, to degrade, and/or to deactivate the active component(s).
