

The invention relates to multi-charge arm, in particular multi-charge rifle with chamber (5) and breech mechanism that has stem of breech mechanism (10) that can be displaced with respect to chamber (5) and blocked in shutoff position by means of blocking device (8). To increase protection against effect of increased pressure chamber (5) is arranged as such that cartridge (34) can be completely placed to chamber (5) and chamber (5) has back support plane (35) that is installed in level with bottom (36) of shell of charge (34) and is in contact with mirror (48) of service elevator (18) of stem of breech mechanism (10).
