

A pelmeni-maker to a home meat mincer contains a removable body with a reducing sleeve and a coupling nut, a hollow screw conveyer for dough, a nozzle for forming a braid of a filling and an additional screw of a filling forcer, mounted in hollow thereof, are coaxially mounted in a loading tank of the body. On the outer side of the surface of the body a dividing and sealing mechanism is mounted. Knives thereof are provided with shoulders for mechanical sealing of the edges of a dough coat of the culinary products cut out. Said mechanism is provided with a removable feeler for discrete programming of the length of culinary products and with a cam mechanism of driving thereof. The attachable pelmeni-maker, in the working position, is rigidly fixed at the thread end of the home mechanical meat mincer, the body of which functions as a support construction of a combined kitchen appliance, a loading bunker and a screw as the main filling forcer and a handle, provided with an additional feeler, as a drive of the forcers and the dividing and sealing mechanism.
