

The invention relates to sulphonamides of formula (I) in which the substituents have the following meanings R^1 = H, alkyl, alkoxy, alkenyl or alkynyl and R^2 , R^3 , R^4 , R^5 = hydrogen, halogen, alkyl, alkoxy or halomethyl, R^2 and R^3 can also together form a phenyl, cyclopentyl, or cyclohexyl ring, whereby said ring can carry R^2 and R^3 , where R^2 , R^3 = H, halogen, alkyl, alkoxy or halomethyl, in the case a), when R^2 , R^3 , R^4 and R^5 = H, X = phenyl, substituted with a group $-C(R^6) = NOR^7$, where R^6 = alkyl and R^7 = alkyl, benzyl, alkenyl, haloalkyl, haloalkenyl, alkynyl or haloalkmyl and in case b), when at least one of the groups R^2 , R^3 , R^4 and R^5 is not H, X = phenyl, naphthyl or a five- or six-membered saturated, partially unsaturated, or aromatic heterocycle, bonded by means of a C atom, comprising one to four heteroatoms from the group O, N or S, where X can be substituted as per the description The invention further relates to methods for production of said compounds, agents composing the same and use thereof for the control of fungal pests which are pathogenic to plants.
