

A method for transmitting messages relating to a multimedia broadcast/multicast service (MBMS) in a radiocommunication system wherein subscriber stations (UE1, UE2; UE) are informed prior to the transmission of useful information as a service (MBMS) which is provided for several subscribers. According to said method, the subscriber stations (UE1, UE2; UE) are informed (PAZ2; PAZ4) by means of a service-dedicated paging display channel (MBMS PICH).
