

The invention concerns a collapsible ironing board comprising a board arranged on two legs (1, 2) forming an X-shaped configuration, the center of the X constituting the central axis (C) about which the two legs (1, 2) can pivot, at least one of the two legs (2) being articulated and consisting of two continuous segments pivotably mounted about a pivot pin (D). The invention is characterized in that it comprises return means (R) arranged proximate the pivot pin (D), said return means (R) comprising a first end and a second end fixed respectively on the first segment and the second segment of the articulated leg (2).
