

There is provided a filter (103) for a smoking article (100). The filter (103) comprises a filter segment (201) comprising filter material, and the filter segment (201) has a cross sectional area measured perpendicular to the longitudinal direction of the filter (103). The filter further comprises a flavour delivery member (205) embedded in the filter segment (201) and surrounded on all sides by the filter material (203). The flavour delivery member (205) comprises structural material enclosing liquid flavourant for flavouring smoke during smoking of a smoking article provided with the filter (103), and the flavour delivery member (205) releases at least a portion of the liquid flavourant when the filter (103) is subjected to external force. The cross sectional area of the flavour delivery member (205) measured perpendicular to the longitudinal direction of the filter (103) is about 30 % of the cross sectional area of the filter segment (201) or greater.
