

The invention discloses a selector switch (1). The selector switch (1) comprises a diverter switch insert (14) having a switching tube (15) able to rotate about an axis (A) and three phases (L1, L2, L3) arranged along the axis (A) of the switching tube (15). Every phase (L1, L2, L3) comprises a switching segment (25), each segment having a resistor arrangement (27). According to the invention, a flywheel mass (35) is mounted on the switching tube (15). The switching tube (15) further supports a high-mass element (36).
