

There is provided a device for generating an inhalable aerosol and/or gas, the device comprising an aerosol generating material (3) having an integrated electrical resistance heating element (2), so that the aerosol generating material may be heated in direct contact with the electrical resistance heating element, wherein the aerosol generating material is provided as a unitary structure and/or coating which may be heated to generate multiple deliveries of an inhalable aerosol and/or gas. There is also provided a method for fabricating the device. There is also provided the use of the device and the use of the aerosol generating material, to generate an inhalable aerosol and/or gas.
