

Disclosed is a screen device, preferably an automatic game and/or entertainment device, comprising a device housing that has a door for opening and closing the device housing. The door of the housing forms a frame for at least one screen. The legs of said frame surround the at least one screen and delimit a frame opening. The frame has a modular structure and can be variably composed of a plurality of frame parts in different configurations in which the frame has different numbers of frame openings and/or frame openings of different sizes.
