

The utility model relates to individual methods for personal protection against hitting with bullets of pistols, revolvers, machine pistols, and can be used in body armors and in protective cloths for special purposes. A protective element of body armor comprises face pack, fabric made of aramid fiber, intermediate layer made of fabric made of aramid fiber, this is soaked with binding agent, and back pack made of foamed plastic. The layers of the face pack are linked with sews that at intersection one with another form polygons and intermediate layer is attached to the face pack.
