

The invention concerns the production of consumer goods, the metallic container with label with image of the designation of product. A method of manufacturing the metallic container provides for production of side wall from sheet blank by its deformation and bottom, putting on side wall of anticorrosive material, binding of side wall and bottom between them, and side wall is labeled by means of a label with designation of product. According to invention as anticorrosive material the material is used on the base of copolymer of ethylene with vinyl acetate with addition of polymeric resins, which is applied on the sheet blank.
