

The proposed everlasting calendar contains a table, in which centuries and years are presented, and a set of table calendars. The table contains a row for selecting the number of the specified table calendar. The set of table calendar contains calendars for all 28 variants of alternation of the months and days for a year. Each table calendar contains information on all weekdays for each of 12 months of the year. The number of the table calendar corresponds to the number indicated in the row for selecting the number of the calendar.
