

The invention relates to compounds of formula (I)

wherein R¹ and R², independently from each other, mean hydrogen, halogen or C₁₋₄ alkyl group; R³, R⁴ and R⁵, independently from each other, stand for hydrogen or C₁₋₄ alkyl group; R⁶ represents hydrogen, C₁₋₄ alkyl or benzyl group; R⁷ means nitro group or amino group optionally monosubstituted by C₁₋₄alkyl, benzoyl, C₁₋₄ alkylcarbonyl, C₁₋₄alkylsulfonyl, C₁₋₄alkylcarbamoyl or C₁₋₄ alkylthiocarbamoyl group; both n and m are 0 or 1, with the proviso that R² is different from hydrogen, when R¹ is hydrogen, as well as stereoisomers or mixtures of stereoisomers thereof, acid addition salts thereof and hydrates, prodrugs and metabolites of all these compounds. The invention relates also to the pharmaceutical compositions comprising the above compounds. The compounds according to the invention possess valuable antiarrhythmic effect.
