

The invention relates to the medicine, in particular to the urology. The technique for the massage of the cicatrical tissue in the prepuce after circumcision has been proposed. The technique consists in extending the prepuce employing the hooks of the levators for the eyelids. The prepuce is extended from the different sites in the opposite directions until the slight pain sensation. The duration of the procedure is 10 minutes. The overall course comprises 10 procedures for 20 days.
