

The composition based on the substances of plant origin designed for improving the natural resistance of animals comprises the aqueous extract of the leaves and branches of the oak (*Quercus robur*) obtained upon autoclaving the raw material. Furthermore the extract of the annual shoots of the pine (*Pinus silvestris*) is added. The raw material is minced and the distilled water is added at a 1:5 (m/v) ratio. The filtrates are mixed at a 1:1 ratio in terms of dry matter.
