

The invention can be used as domestic and industrial fuel, and also as reducer in different technological processes. The invention allows making cheap high-strength fuel briquette. For this purpose in the composition for making fuel briquettes which contains fuel high-strength base, starch-containing binding agent and water, as fuel high-strength base the composition contains coke fines, at that it additionally contains cross-linking agents, e.g. lime or metal salts, waterproofing agent taken at the following ratio, % by weight:

coke fines	93.0-74.0
starch-containing binding agent	1.4-8.6
cross-linking agents	0.1-1.1
waterproofing agent	0.1-1.5
water	5.4-14.8.

As starch-containing binding agent the composition contains agricultural production waste.
