

A facade and/or roof comprising a metal framework wherein the areas thereof can preferably be provided with panes of insulating glass, the metal framework consists of stay profiles (1) and transom profiles (2) oriented at an angle thereto. Seals (4, 5) are placed on the stay profiles and transom profiles. The invention is characterized in that at least one glass bearing area (13) of the seals (5) of the transom profiles (2) is provided with at least one condensation gutter (17).
