

The frame of a trailed sprayer consists of a transversal bar-guide, to which connected are two semi-axes of running wheels with bearing units and longitudinal longerons with a trail. Each of the semi-axes of the running wheels is made as vertical and horizontal consoles, the trailer is made as an L-like attachment element in such a manner that it is allowed to be arranged and fixed, by the larger side, in a position needed of the vertical plane in the guide, which is hingingly connected to the ends of the longerons and is allowed to freely rotate around the axis in the vertical plane, and the lesser side is made as a trailed ring. In addition at the intersection of the larger and lesser sides of the L-like attachment element a brace, which, by its other end, is hingingly arranged on the rod of the longitudinal longerons.
