

Support frame of executive equipment of frontal loader on basis of wheel tractor includes long beams with elements for fixation of back ends of those at rear axle of tractor, units for fixation of front ends of long beams to frame of tractor, cross beam and beam with its control hydro-cylinder. Long beams are arranged with placed outside side elements and upper and lower shelves forming [-like cross sections. Unit for fixation of front end of each of those beams is made of welded with lap to outer sides of beam shelves support sheets. The invention relates to machines intended for implementation of loading and earth-moving operations, in particular to machines of type of single-bucket frontal loaders.
