

A process for production of special vodka provides for treatment of water, preparation of aromatic alcohol from vegetable raw material, in particular tea, by shredding thereof, mixing with a 50% aqueous-alcoholic liquid, infusion of mixture and distillation of the first pouring, blending of the prepared aromatic alcohol of vegetable raw material, with aqueous-alcoholic liquid. Tea with the theine mass concentration of 2.5-3.0% is used as vegetable raw material and infused on a 50% aqueous-alcoholic liquid in weight ratio of 0.8-1.2-23.0-15.0 to extraction of 65-75% of extracts materials. After distillation the aromatic alcohol of tea extract of 75-80% strength is separated and added to a aqueous-alcoholic liquid in weight ratio of 0.8-1.2-29.0-19.0, and after blending vodka is conditioned to 40% blend strength.
