

The friction purpose polymer compound includes polymer binder, butadiene-acrylonitrile rubber, barytic concentrate, alumina, graphite, electrolytic copper powder, bronze chip, diammonium phosphate and fibrous filler. As a polymer binder contains epoxide binding substance consisting of oligoepoxy ester – 83.00 – 94.99, amino amide type latent hardener – 5.00 – 16.00, acetylacetone chrome (copper) – 0.01 – 1.00.
