

A method for harvesting feed roots includes separating the tops from roots not yet harvested, shredding and scattering thereof on the surface of the field, digging the roots and placing thereof in a windrow, picking up the roots and loading thereof into transport vehicles. After removing the tops simultaneously with digging the roots and placing thereof in a windrow the scattered tops are removed from the area of the rows dug out by means of blowing thereof in the direction of a harvested field by the directed air flow. The invention relates to farm production, in particular to methods of root harvesting and to devices for carrying out thereof.
