

A filtering cigarette holder for smoking contains a cylindrical hollow body on one end of which a fitted box is arranged. It is provided with a hollow for arranging a tobacco article, with a longitudinal channel for passing tobacco smoke and with a fitted tube projecting inside the body coaxially to the channel. On the side of the second end the cigarette holder is provided with a channel for passing tobacco smoke and contains a mouthpiece projecting inside the body. In the hollow of the body a reflecting screen is arranged with the adjusted distance up to the outlet opening of the fitted tube. The fitted tube is provided with the outer threading, and the reflecting screen is made as a disk, coaxially arranged in the hollow of the body, which is coaxially connected with the fitted tube, provided with the outer threading, through a longitudinal belt and an adjusting nut.
