

Electrostimulator comprises the generator of the functions which have been carried out as the regulated master frequency generator with three outputs and the first transformer of signals, power amplifiers, transformers, isolated optoelectronic couples, diodes, concurrence elements, first and second fixed values resistors, bus of power supply and zero potential. Additionally, the second and third transformers of signals, two input OR element, two input switch, third and fourth fixed value resistors, first, second and third variable resistors are included in the Electrostimulator.
