

The method for wiring point of terminations to connect electric apparatus or element blocks includes wiring between points of terminations with the help of controlled mechanical wire placer and creation in the points of terminations for connection of an electric contact.

On realizing the method is carried out the following operations:

- preparation of an electrical device or element blocks for wiring;
- deliver the first place of connection and install it in the required position;
- insert the continuous wire end and fix it in this area;
- deliver one by one each following connections and with the help of positioning it is mounted in the required position;
- on each place of connection is inserted the continuous wire into the contact area of this place and fix it;
- the underlaid wire is cut in the end of wire laying in the field of corresponding place of connection.
