

Mechanized screen fixation includes basic sections connected to basic beam of executive device with levers with built-in hydro-jacks of feeding motion and to each other with goaf and face links, and supplementary sections. The last ones are installed between main sections and connected to each other with pairs of hydro-jacks of travel. Hydro-jacks are in hinged way installed with one ends at two sides of face end of each basis of supplementary section and with the other ends – on support holders with stands of each basis of main section. Fixation is arranged with five-section blocks.
