

A method for treatment of hip joint diseases consists in complex use of peloidotherapy, exercise therapy and acupuncture. At the beginning and at the end of course of treatment the acupuncture is carried out on the second inhibitory method on the acupuncture points of common and specific action, and then every other day the complex, comprising the performing of introduction of mud rectal tampon with an electrode and mudelektropuncture on the acupuncture points, and complex, comprising the auriculopuncture, hydrokinesotherapy, isometric exercises and therapeutic physical training on veloergometre are carried out by turns. The auriculopuncture is carried out during all period of performing the given complex. Consistently from a seance to the seance the temperature of rectal mud tampon is increased from 38 °C to 42–46 °C. The temperature of mud during performing of mudelektropuncture is increased from 50 °C to 56–60 °C. The procedure duration of mud rectal tampon introduction with an electrode and mudelektropuncture is increased on 2 minutes from 20 to 30 minutes, and current frequency for mudelektropunctur is consistently lowered from a seance to the seance from 120 Hertz to 2.5 Hertz.
