

A compositional paste for sausage production includes a raw protein-bearing material and fat components. The paste contains 20-40% of pea malt flour and maize flour, hydrated with water (in a ratio of 1:2), taken in a ratio of 30-42 to 70-58, and also compositions of by-products of the second category of 60-80% as the raw protein-bearing material. Melted pork fat of no less than the first grade in an amount of 5-15% to the mass of the raw protein-bearing material is used as the fat component.
