

Invention relates to the enterprises and organizations, which deal with secret records management, in particular, to the devices for crushing and destruction of secret and business papers.

Device for crushing of material contains housing, in which are consecutively established receiving bunker, feeding rolls, which rotate towards each other, drum with cutter and output bunker, guiding element. Device is equipped with mixer made in the form of roll with diametrical and spaced cutters established in the output bunker perpendicular to its axis. In the cutter there is a possibility of adjusting the angle of cutting. Guiding element is executed in the form of nozzle with lower cutting edge and is located between feeding rolls.
