

The invention relates to the industry of building materials. The preparation is carried out by means of separation of definite fractions and mixing of them. As wastes of gravity coal beneficiation the mixture of wastes of beneficiation of long-flaming gas sulphurous, gas fat and exhausted low-sulphur, coke low-sulphur, fat and exhausted baking high-sulphur, gas fat low-sulphur coals is used, the fraction is less than 25 mm is separated in every waste and the wastes of separated fraction are mixed.
