

The invention relates to the building materials. The coating contains pigment, promoter, glass-forming substance. As the promoter the galvanizing sludge is used in a form of mixture  $\text{Cr}_2\text{O}_3$ ,  $\text{Fe}_2\text{O}_3$ ,  $\text{CuO}$ ,  $\text{NiO}$ ,  $\text{ZnO}$ ,  $\text{CaO}$ ,  $\text{SiO}_2$ ,  $\text{Al}_2\text{O}_3$ , but as pigment – at least one oxide from group  $\text{Fe}_2\text{O}_3$ ,  $\text{CuO}$ ,  $\text{Cr}_2\text{O}_3$ .
