

A composition for producing foamed polyvinyl chloride material consists of polyvinyl chloride and additive of polar compound. It contains suspension or mass polyvinyl chloride as polyvinyl chloride, and as additive it contains sodium alkylsulfonate. The invention relates to compositions for producing foamed polyvinyl chloride material being used as filters, vibro- sound- and heat protecting materials in construction, automobile- and shipbuilding, aviation and other fields of industry, and also for producing different articles of domestic purpose, to methods for the preparation thereof.
