

Method for determination of winnings in lottery includes creation of lottery-tickets for lottery of bingo type, each of those has unique numerical combination. This numerical combination contain given number of different numbers and unique identification index for each ticket. Identification index and the rows of numbers of each lottery-ticket are remembered in the first registry intended for reading by microprocessor. The tickets are printed according to information on numbers and identification indices stored in the first register. This invention relates to the method for determination by lot, with use of microprocessor, of winners in lottery with pre-defined total amount of winnings.
