

The invention relates to the means for connection of pipes, in particular, polymeric, and it can be used for connecting the polyethylene pipes at execution of repairing of gas-, water pipes and other pipeline systems under field conditions. A method consists in that activation working of combinable pipes is carried out, the glue is applied on the external surfaces of combinable pipes and/or on the internal surface of coupling, after which the ends of pipes are connected, coupling is installed at the point of contact and the glue is solidified after installation of coupling.
