

The invention relates to the tire industry. A protector contains isolated protrusions with slit-shaped grooves of zigzag form and variable depth. In each protrusion at the beginning and at the end of the zigzag slit-shaped grooves along the axis of their symmetry the straight sections are made, at that straight sections made at the beginning of zigzag slit-shaped grooves are located outgoing from one point and at the angle of 90-120 degrees to each other, dividing the protrusion into the elements, and the depth of slit-shaped grooves is greater than the depth of the grooves, which divide the isolated protrusions.
