

The invention relates to the medicine, namely to the devices and the methods used in physiotherapy, namely war bathing and washing with the particular hygienic purpose as well as for the therapy using the devices for maintaining the desired pressure. The part of the body to be subjected to the procedure is isolated from the environment with the aid of the device intended for realizing the method. The corresponding vacuum is generated in the device with the required gas composition of the dry bath. In the course of the procedure, the vacuum degree as well as the content of the composition of the dry bath are varies. When necessary, the bath with the peloid and the steam is used.
