

A method for batch communication in a mobile radio network executed in the form of a switching network containing mobile stations and base stations. At radio communication for batch communication a communication channel and an identification number indicating on the batch type of data are assigned to the mobile station participating in the connection. The method is characterized by that separate batch transmission is executed in the dedicated communication channels, and that a common control channel is given in disposition to a few mobile stations which have dedicated batch communication channel, and that in the common control channel the data batches are supplied with identification number corresponding to the related mobile station.
