

The invention concerns equipment for putting the picture by method of serigraphy and can be used for putting the picture on printed flattened articles, which are supplied by conveyor method with periodicity from 0.1 to 2 articles per second, in particular for putting the picture on ceramic tile. A squeegee head for screen printing contains a doctoring blade, a squeegee mechanism of damping the doctoring blade in the plane of its movement, which has a support and a spring, and a basis, to which is fastened the mechanism of damping.
