

Collapsible structure comprises of three-dimensional bricks installed one above another and rigidly fixed to each other with vertical rods fixed on the level of the upper brick with fixation appliance in the support element. Specific peculiarity of the structure is in the fact that the support element has a long slot for the fixing appliance, and vertical cavities going through it, fixation element is made as a slide with vertical slots, this provides possibility of reciprocal displacement and interaction with the lower part of the vertical rod, made of connected to each other elements; and three-dimensional bricks have through vertical cavities.
