

An appliance for bulk materials pouring to valve bags has a tank, a feeding crater, a material guide with a valve at the entrance, a supply unit of rotor type, with a housing having apertures for installation of the material guide and of the discharge branch pipe, a loading unit and a unit for measuring weight, and an automation system. The outlet end of the material guide and the discharge branch pipe are installed with a shift to one side with respect to the plane going through the axis of the rotor, in parallel to the axis of the discharge branch pipe.
