

The invention relates to a glass-reinforced plastic production, precisely, to the roll glass-reinforced plastic materials, used for the fences, decorative needs, and the pipelines thermal isolation, it contains a fiberglass or a mineral-fiber filler, a polyvinyl-chloride latex or its copolymers with a vinyliden-chloride, and additionally contains a thermo-reactive resin, a plasticizer, the surface-active substances, modifiers, the dyes and the fillers. The roll material contains more binder, and has a strength, a hardness, and an elasticity, corresponding the users needs.
