

The invention relates to the food industry. A composition of malts for producing the bioactive additive "Vitex" contains (mass fractions): wheat malt 0,8-1,2, corn malt 0,5-1,0, oat malt 1,0-2,0, barley malt 1,0-2,0 and pea malt 1,0-1,5. The proposed ratio between the components ensures the increased quantity of vitamins, proteins and aminoacids.
