

The offered reloading complex for direct overload of bulk cargoes from cars into a vessel, having a platform with rails, supporting wedge carriage connected to a dock-pontoon, with a compartment for the barge and ballast with possibility of adjustment of platform position. The complex as a support of the carriage contains a ship hull mounted on the angle on the coastal basis, the rails are laid on the deck of said hull. The said dock-pontoon is fastened with additional dock-pontoon with rails made with difference of level of the deck line within the limits of 10 degrees. The method of execution of reloading complex is offered too by strengthening of its coastal basis, its covering by metal plates with apertures, their fastening by rigid and/or flexible links with formation of the grid.
